

Workshop on Career in Actuarial Science and Commercial Piloting

A career guidance workshop on Actuarial Science and Commercial Piloting was conducted for the students of Classes XI and XII on 3 November 2025. The session aimed to introduce students to emerging and unconventional career opportunities. The workshop enabled the students to understand the skills and competencies required for pursuing these careers and making informed career decisions.

The resource persons from the field of aviation were Captain Prit Pal Singh, a Commander with Air India, currently flying the Boeing 737 MAX and Mr. Meet Manjot Singh Bhasin, an Aviation Training Consultant for over 17 years. For Actuarial Science, the session was led Ms. Ruhani, an actuarial professional based in London with experience across P&C and health insurance. She is currently working with Capitawise, where she develops actuarial models and analytics tools that combine traditional techniques with modern technology.

The speakers delivered insightful presentations explaining the roles, responsibilities, and growth prospects in both the fields. The students were informed about the eligibility criteria, entrance examinations, and professional certifications required. Real-life examples, anecdotes and interactive discussions made the session engaging.

The workshop concluded with a lively Question - Answer session, in which students actively participated and clarified their queries. Overall, it was an enriching experience that broadened their career perspectives and inspired them to plan for the future with confidence and purpose.
